

## COMPREHENSIVE EXAM PREFERENCE SELECTION

At Schererville Eye Care, we believe this includes tending to your needs and concerns as well as maintaining the overall health of your eyes with a detailed exam including dilation and retinal imaging.

OUR DOCTORS RECOMMEND A COMPREHENSIVE EXAM WITH RETINAL IMAGING/ DILATION ANNUALLY.

Retinal imaging/dilation allows us to better manage your ocular health and possibly detect conditions you may not have been aware of. Potential conditions include:

- Diabetes
- High Blood Pressure
- Glaucoma
- Floaters
- Stroke
- Cancers/Tumors
- Macular Degeneration
- Retinal Tears Detachments

A comprehensive exam with retinal imaging may not be covered by insurance and would therefore be an additional fee. Imaging requires ***NO eye drops, does not affect pupils, avoids all dilation side effects and can be done in seconds.*** It also provides a more consistent, visual form of health documentation when done annually.

A comprehensive exam which includes dilation drops is typically covered by most vision plans. Dilation drops will temporarily enlarge your pupils and has the potential to cause side effects including things such as:

- Blurry vision at near, including cell phone and computer distance
  - Sensitivity to lights for at least 4 hours
  - Headache and/ or eye strain for the day
- I prefer to have my exam with RETINAL IMAGING ONLY (\$25 fee if not covered by insurance.)
  - I prefer to have my exam with RETINAL IMAGING & DILATION (\$45 fee if not covered by insurance.)
  - I prefer to have my exam only with DILATION ONLY (\$20 fee if not covered by insurance.)
  - I prefer an UNDILATED exam.
